

Adlumin – Your Command Center for Security Operations

Discover, contain, and remediate threats before they stop your firm and destroy your reputation.

Law firms rely on platforms like Adlumin to protect their business and clients from cyber threats. Mergers, investment strategies, trade secrets and intellectual property (IP) filings, wealth and estate management, insurance claims, malpractice, and injury suits, are all targets of cybercriminals.

Your firm's reputation is based on your ability to protect your client's confidential information.

Public cybersecurity incidents can be extremely damaging to the firm and any attorneys whose clients are affected. The public nature of the legal system combined with an unparalleled access to a crossroads of confidential and proprietary information is what makes law firms a top target of sophisticated and industrialized criminals like ransomware gangs and state-sponsored actors.

These criminals are familiar with the critical systems like document management, file sharing services and time and billing systems, and have honed their tools and tactics to mimic legitimate business traffic to exploit law firms and their clients. Once compromised, criminals can sell stolen documents on the darknet, use trade secrets and non-public business transactions to make illegal gains on public markets, hold the firm hostage by crippling operations with ransomware, or extort the firm by threatening to expose stolen client records.

Cybercriminals target law firms with the following intentions:

Resell stolen client information on the dark web.

Defraud the firm's clients using stolen billing and case information.

Extort the firm to avoid a public data breach scenario

Disrupt business operations with a prolific ransomware attack.

Ideological retaliation against the firm for its clients or practices.

While law firms are not directly regulated, your clients are and by extension, you must meet their compliance obligations. Financial institutions, healthcare providers and MedTech firms, educational institutions, and more are directly regulated with vendor standards that extend to law firms. Investigations and penalties are both financially costly and can destroy the attorney-client bond. Lawyers must also meet the Model Rule of Professional Conduct and abide by American Bar Association (ABA) formal opinions as they relate to technology, cybersecurity, confidentiality, and breach notification. Additionally, law firms manage personally identifiable information (PII), credit card transaction data (PCI,) and protected healthcare information (PHI).

Law firms and practices rely on digital data storage, management, and movement. Emerging technology and client needs make it harder for firms to secure their environment and employees, track data movement, and comply with ever-changing privacy regulations. As cyberattacks increase, law firms must have real-time visibility to ensure their client data is secure and help combat attack vulnerability. Meeting various compliance requirements, providing extensive reports to financial auditors, and overall network monitoring can be highly time-consuming. If done incorrectly, the results could be devastating to your law firm and, most alarmingly, to your clients.

Solution

Illuminate Threats. Eliminate Risk. Command Authority.

Adlumin understands what you can't see poses the greatest risk. Your exposures lurk in the cloud, your hybrid environments and the darknet. There are countless gaps where threats can hide before they lead to organization disrupting events like ransomware shutdowns or massive data breaches.

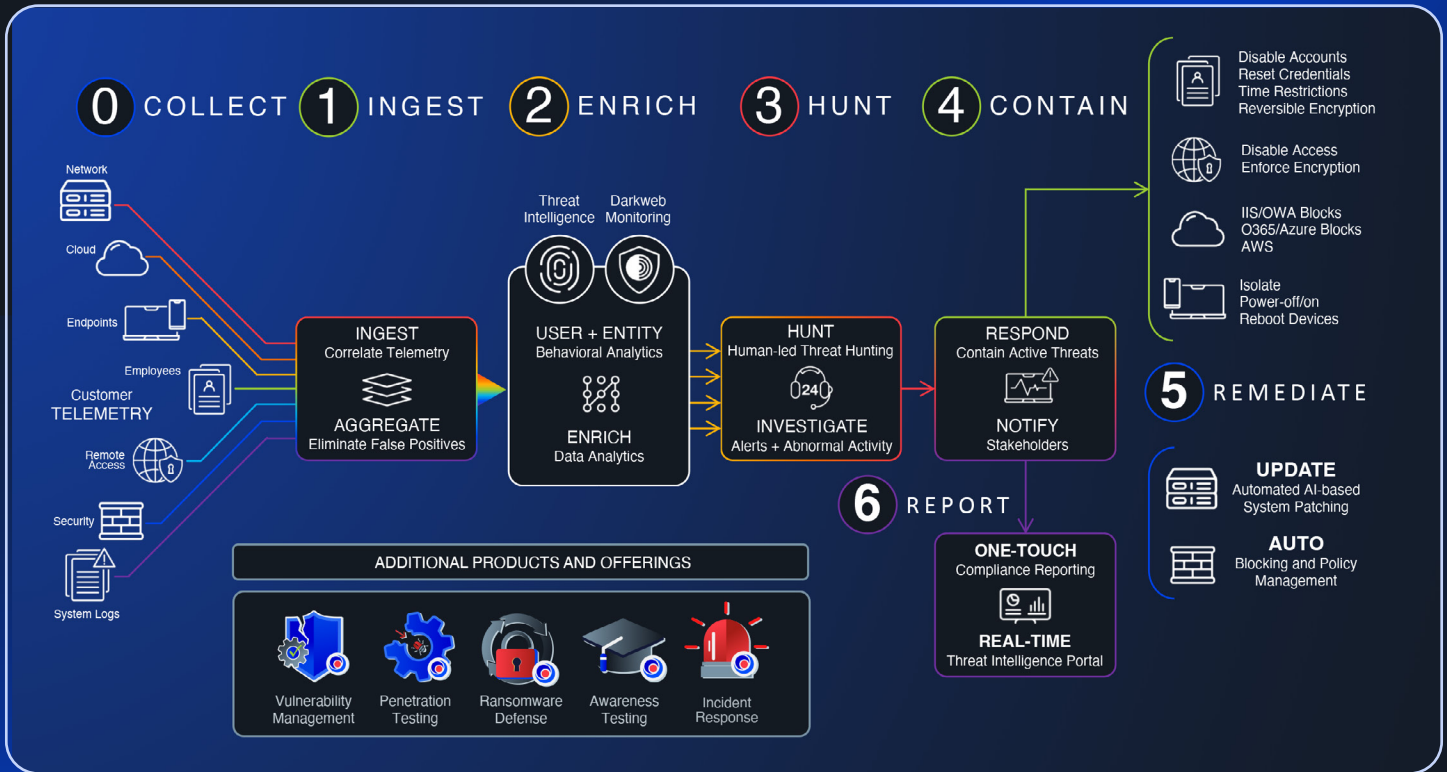

Adlumin is a patented, Security Operations Platform that focuses on simplifying the process of complex compliance reporting, providing IT resources, tools, and experiences to enhance your organization's security landscape. Our platform illuminates the threats that would have otherwise gone unseen in the lead-up to a massive attack. Additionally, the platform provides financial institutions with active directory and account monitoring, deep and dark web monitoring, perimeter defense, and log management capabilities to deliver Adlumin's command center for security operations and MDR Services.

Adlumin provides law practices with:

- 24x7 threat hunting to detect and contain threats before they disrupt your business or damage your reputation.
- Live, one-touch customizable compliance reporting to assure clients and meet due diligence requirements.
- CLE-approved security awareness training and testing to meet attorney continuous education requirements and general compliance for non-licensed employees.
- Managing partner reports and briefings on cybersecurity related topics.

Adlumin Security Operations Platform

Adlumin's Platform plus MDR Services.
Your Command Center for Security Operations.

What you can't see poses the greatest risk to your organization. Your exposures lurk in the cloud, hybrid environments, and the darknet. There are countless gaps where threats can hide before they lead to business disrupting events like ransomware shutdowns or massive data breaches.

Adlumin Inc. is a patented, cloud-native Security Operations Platform plus Managed Detection and Response Services. The platform focuses on advanced cyber threats, system vulnerabilities, and sprawling IT operations to command greater visibility, stop threats, reduce business risk, and automate compliance. The command center for security operations, Adlumin leverages powerful machine learning, identifies critical threats, orchestrates auto-remediation system updates, and provides live continuous compliance reporting. Don't let your IT organization be caught in the dark.
